Problem Analysis

Hueneme High School, like many schools in the Oxnard Union High School District, faces challenges with low proficiency rates in the English Language Proficiency Assessments for California (ELPAC). In the 2022-2023 school year, only 9.21% of students scored proficient. Although there was a slight increase to 15.54% in 2023-2024 after implementing an ELPAC Saturday Academy, a significant gap still exists. One challenge lies in the Speaking portion of the ELPAC, where students are required to analyze graphs and respond to claims. As an ELPAC proctor, I've seen firsthand that this section often receives low scores. Therefore, targeted interventions are essential to bridge the gap between math skills and language proficiency.

Target Audience

This module is specifically designed for Long-Term English Learners (LTELs) in grades 9-12 at Hueneme High School. The students require additional support when it comes to analyzing graphs and responding to claims on the Speaking portion of the ELPAC. They frequently struggle with both the mathematical skills needed to interpret data and the academic language skills required to express their analysis clearly. Additionally, the module will serve as a valuable resource for designated ELD teachers and those involved in the ELPAC Saturday Academy.

Learning Objectives

Students will be able to...

1. Identify and describe key components of a bar graph.
2. Interpret the data presented in a bar graph.
3. Write complete sentences that accurately describe the data from a bar graph.

4. Evaluate claims made about the data in a bar graph and determine if they are supported.
5. Verbally respond to questions about a bar graph.

Assessment

To assess whether students are mastering the learning objectives, they will be evaluated through:

1. An interactive tool to label the components of a bar graph.
2. Multiple choice questions interpreting data from a bar graph.
3. Writing three sentences summarizing the data on the bar graph.
4. Participating in a group discussion to evaluate a claim based on a bar graph.
5. Responding to questions about a bar graph through an audio recording or video.

Instructional Strategies

This module will employ a variety of instructional strategies to keep students engaged. We will start with visual aids and direct instruction to introduce key concepts. The teacher will model how to analyze graphs and construct sentences using a facts and opinions chart to evaluate claims. Students will then engage in guided, hands-on practice labeling graphs and writing sentences with support. Collaborative learning will be encouraged through group activities that promote discussion and evaluation of claims based on data. Additionally, video tutorials will be used to explain concepts and provide examples.

Resources

Among the resources, H5P will be our primary tool for creating interactive activities such as drag-and-drop and multiple choice questions. Visual aids, such as bar

graphs, will be designed using Canva. A research article will inform the use of anchor charts that model sentence construction with a facts and opinions chart, featuring prompts like “Facts: What do I see” and “Opinions: What do I think?”. Worksheets created on Canva will guide students through examples.

Conclusion

In conclusion, this module is focused on equipping students with the skills they need to succeed on the Speaking portion of the ELPAC, particularly in analyzing graphs and articulating their thoughts. By integrating math and language skills, we aim to create a supportive learning environment that empowered English learners to thrive.
